Please Note:

- Unit balances are calculated as the NZU entitlements net surrenders that have occurred to date
- As Carbon Accounting Areas (CAAs) may contain areas of various forest types or be spread across regions, such CAAs have been categorised into a single forest type and region based on their largest constituent areas.
- Some areas are categorised as "Other" due to nonstandard registration information.
- Land is designated as subject to the Field Measurement Approach (FMA) if it belongs to a participant who has had greater than 100ha of land registered at any one time during the current mandatory emissions return period.
- Figures are of Post-1989 forest land registered in the ETS as at the time the report was generated. Transmissions of interest (through land sales or the issuing and cessation of leases and forestry rights), changes to registrations under s144 review, and land reconfigurations may introduce minor inaccuracies to these figures while these are being processed.
